

Aryanveda Antiphotoaging SPF-40 Cream & Gel

Under the sun, there is nothing new happening under the sun. Especially when sun comes out with all its suns blazing, life becomes more dull. Outcome the veils, the sun glasses, the regular sun-protection creams yet the sun-streaks would penetrate your much-trusted shields and leave your skin damaged and darkened.

Over the years, Cosmetic science has evolved and discovered many elements to be used in sun protection creams and lotions yet the results are not really overwhelming....something has been missing.

In recent times, scientists and cosmetologists also have found that excessive exposure to sun-rays may also cause photo-aging, in simple words premature skin-wrinkles due to sun-exposure. However, sun cannot be blamed for all photo-ageing issues. Intrinsic aging /chronological aging is an inevitable and continuous process (biological clock of skin cells) which is beyond human potential to control however Extrinsic aging (external factors): pollution, smoking, sun (photo aging) premature skin aging can be combated if appropriate remedy is implemented.

In all the circumstances and given researches, it has been found that sun is 90 % responsible for premature photoaging.

69-year-old truck driver with strong case of photoaging. In the 28 years he spent driving trucks, the man's face received far more sunlight on the left side with the sun streaming in through the driver's side window.

Is sun , a disguise in blessing ?

Absolutely not. It's the life-savior and is the only never-ending source of energy. It is the most natural reservoir of essential vitamin D (indispensable for bone growth and calcium absorption) and -Stimulates endorphin production (happiness and euphoria feelings). It is the excessive sun-exposure and harmful UV rays that causes tanning, skin photoaging. Over the time, many chemical based or mineral oil based sun-protection creams and lotions have been there in the market but the results were dismal.

Rays are absorbed by the filter. Energy is released through less harmful rays but the efficacy is not 100 %.

AryanvedaAntiphotoaging SPF-40 & 50 Cream and Matte gels the latest and most reliable solution to fight photo aging. It is now globally accepted fact that common sun-screen creams could not protect your skin completely from photoaging. In the wake of it , AryanvedaAntiphotoaging SPF-40 & 50 Cream and Matte gelcan turn out to be a boon against the harmful effects of sun-rays.
